

OUR MISSION

Reduce energy consumption in new and existing buildings and create a more sustainable built environment through seamless delivery of services, including:

- Energy Efficiency verification and testing
- Analysis, design and implementation of high-efficiency HVAC renewable energy systems
- Construction Management

Blower Door Testing

PROJECTS

- Design & Installation of solar photovoltaic (PV) electricity generating systems
- Design & Installation of solar thermal (hot water) systems
- Verification for tax credit, Energy Star, NAHB green building certification
- Design consultation for energy efficient, passive solar and active solar design
- Carbon Footprint analysis and management
- Building envelope thermal imaging and air sealing

WHO WE ARE

SBS staff members are accredited under:

- Leadership in Energy and Environmental Design (LEED) program
- Residential Energy Service Network (RESNET)
- Home Energy Rating System (HERS) (BPI)
- National Association of Home Builders (NAHB) Green Home Certification Program
- American Institute of Architects (AIA)
- Professional Engineer/Contractor

We have a professional staff that is knowledgeable and experienced in multiple renewable energy technologies, energy conservation and building science.

We use an "integrated approach" to improve building performance by providing analysis of all applicable energy technologies that meet our clients' needs. This enables us to design and implement cost-effective retrofits that maximize energy payback.

Thermal Imaging

Call and let us lower your energy use today.
